## **1. INTRODUCTION**

### **1.1 PROJECT OVERVIEW**

Nowadays, fashion applications and e-commerce are growing more and more, and it also has some problems when finding the customer's wanted product in the web applications. Having a chatbot that understands the algorithm of a specific application can be of great aid. We are implementing such a chat bot in a web application, which is fed with the knowledge of the application's algorithm and helps the user completely from finding their needs to processing the payment and initiating delivery. It works as an advanced filter search that can bring the user what they want with the help of pictorial and named representation by getting simple user information and activities. The application also has two main UI interactions: one is the user panel and the other one is the admin panel. Users can interact with the chat bot to search for products, order them from the manufacturer or distributor through chatbot AI, and it can also make payment transactions, track the delivery, and so on. The admin interface enables the user to upload products' details, user details, orders and find how many products have been bought; supervise the stock availability; and interact with the buyer regarding the product reviews.

We have come up with a new innovative solution through which you can directly do your online shopping based on your choice without any search. It can be done by using the chat bot.

In this project you will be working on two modules:

1. Admin and
2. User

Admin:

The role of the admin is to check out the database about the stock and have a track of all the things that the users are purchasing.

User:

The user will login into the website and go through the products available on the website. Instead of navigating to several screens for booking products online, the user can directly talk to Chat bot regarding the products. Get the recommendations based on information provided by the user.

### **1.2 PURPOSE**

- a) Using chatbot we can manage user's choices and orders.
- b) The chatbot can give recommendations to the users based on their interests.
- c) It can promote the best deals and offers on that day.
- d) It will store the customer's details and orders in the database.
- e) The chatbot will send a notification to customers if the order is confirmed.
- f) Chatbots can also help in collecting customer feedback.

## **2. LITERATURE SURVEY**

### **2.1 EXISTING PROBLEM**

#### **1. Fashion item representation**

Traditional recommender systems such as Collaborative Filtering or Content-Based Filtering have difficulties in the fashion domain due to the sparsity of purchase data, or the insufficient detail about the visual appearance of the product in category names. Instead, more recent literature has leveraged models that capture a rich representation of fashion items through product images, text descriptions or customer reviews, or videos which are often learned through surrogate tasks like classification or product retrieval. However, learning product representations from such input data requires large datasets to generalize well across different image (or text) styles, attribute variations, etc. Furthermore, constructing a representation that learns which product features customers take most into account when evaluating fashion products is still an open research problem.

#### **2. Fashion item compatibility**

Training a model that is able to predict if two fashion items ‘go together,’ or directly combine several products into an outfit, is a challenging task. Different item compatibility signals studied in recent literature include co-purchase data, outfits composed by professional fashion designers, or combinations found by analyzing what people wear in social media pictures.

#### **3. Personalization and fit**

The best fashion product to recommend depends on factors such as the location where the outfit will be used, the season or occasion, or the cultural and social background of the customer. A challenging task in fashion recommendation systems is how to discover and integrate these disparate factors. Current research often tackles these tasks by utilizing large-scale social media data.

#### **4. Interpretability and explanation**

Most of the existing fashion recommender systems in the literature focus on improving predictive performance, treating the model as a black box. However, deploying accountable and interpretable systems able to explain their recommendations can foster user loyalty in the long term and improve the shopping experience

#### **5. Discovering trends**

Being able to forecast consumer preferences is valuable for fashion designers and retailers in order to optimize product-to-market fit, logistics and advertising.

## **2.2 REFERENCES**

### **“A Systematic Study on the Recommender Systems in the E-Commerce”**

Electronic commerce or e-commerce includes the service and good exchange through electronic support like the Internet. It plays a crucial role in today's business and users' experience. Also, e-commerce platforms produce a vast amount of information. So, Recommender Systems (RSs) are a solution to overcome the information overload problem. They provide personalized recommendations to improve user satisfaction. The present article illustrates a comprehensive and Systematic Literature Review (SLR) regarding the papers published in the field of e-commerce recommender systems. We reviewed the selected papers to identify the gaps and significant issues of the RSs' traditional methods, which guide the researchers to do future work. So, we provided the traditional techniques, challenges, and open issues concerning traditional methods of the field of review based on the selected papers. This review includes five categories of the RSs' algorithms, including Content-Based Filtering (CBF), Collaborative Filtering (CF), Demographic-Based Filtering (DBF), hybrid filtering, and Knowledge-Based Filtering (KBF).

## **2.3 PROBLEM STATEMENT DEFINITION**

Problem Statement 1:

The User Needs a way to Find Trending Fashion Clothes so that Here find the All Collections

Problem Statement 2:

The User Needs a way to Find Offers and Discounts so that Here User easy to find Daily Offers

Problem Statement 3:

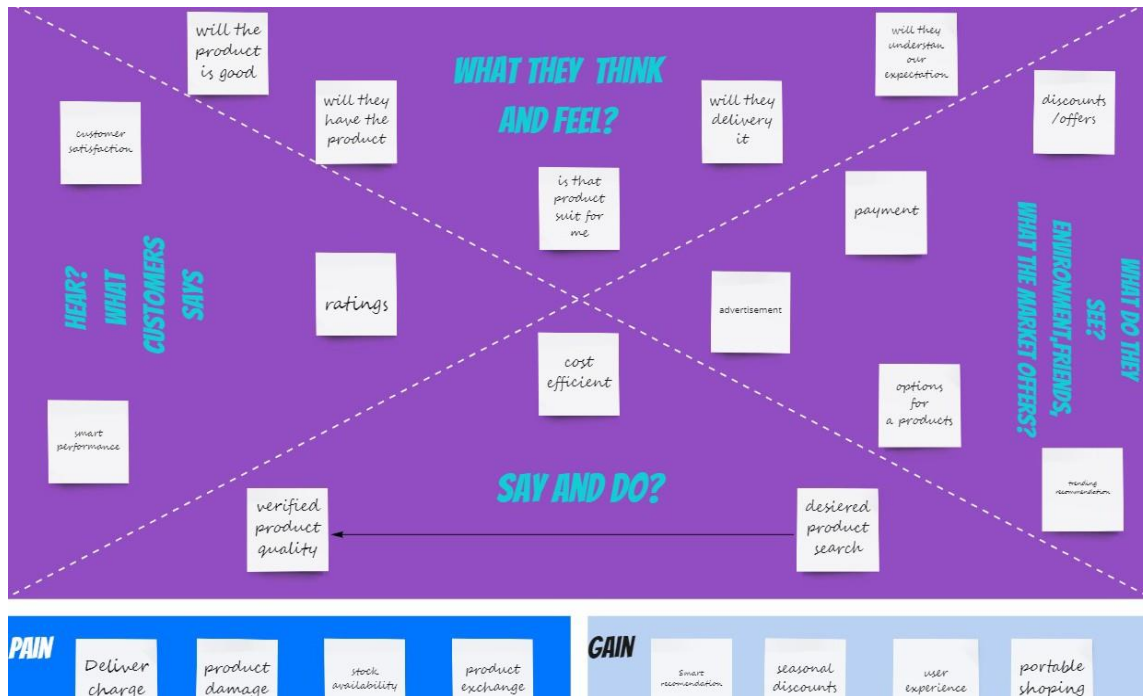

The User Needs a way to Assistant for finding Clothes so that Here User got the Chat Bot assistant

Problem Statement 4:

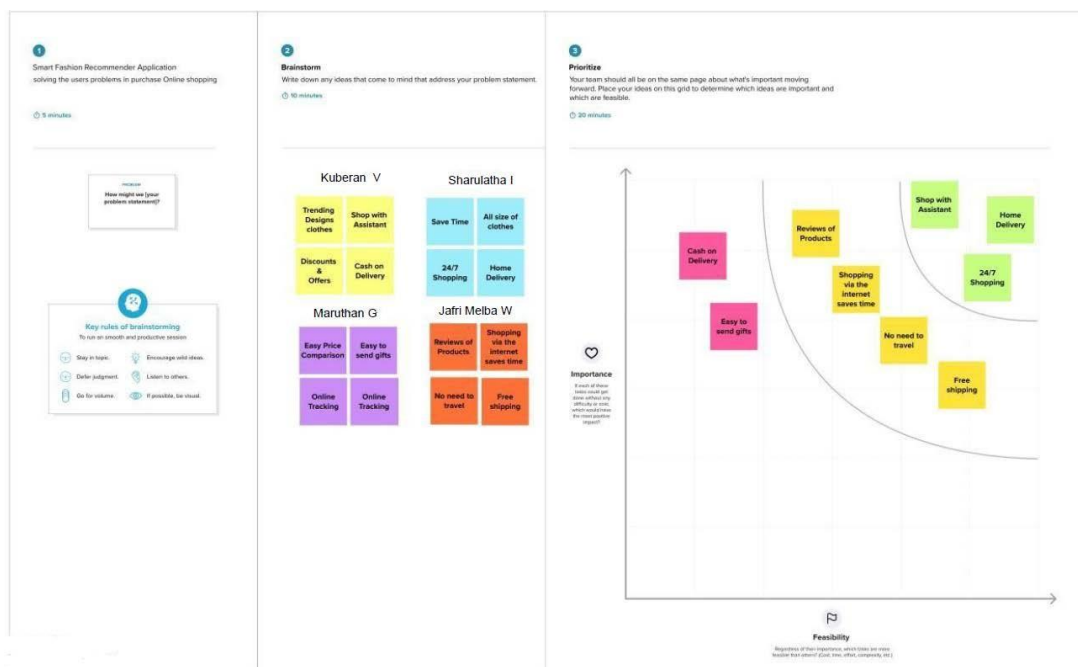

The Sellers Needs a way to struggling to sells products offline so that Here Sellers will Sell Products via our application.

### 3. IDEATION & PROPOSED SOLUTION

#### 3.1 EMPATHY MAP CANVAS

#### 3.2 IDEATION & BRAINSTORMING

### 3.3 PROPOSED SOLUTION

S. No	Parameter	Description
1.	Problem Statement (Problem to be solved)	Customers feels difficult when Search many websites to find Fashion clothes and accessories.
2.	Idea / Solution description	Customers directly make online shopping based on customer choice without any search.
3.	Novelty / Uniqueness	The customer will talk to Chat Bot regarding the Products. Get the recommendations based on information provided by the user
4.	Social Impact / Customer Satisfaction	The user friendly interface, Assistants form chat bot finding dress makes customer satisfied.
5.	Business Model (Revenue Model)	The chat bot sells our Products to customer. Customers buy our products and generate revenue
6.	Scalability of the Solution	We can easily scalable our Applications by increases the items and products

### 3.4 PROBLEM SOLUTION FIT

Define CS, fit into	<b>1. CUSTOMERS SEGMENT(S)</b> <span>CS</span> <ul style="list-style-type: none"> <li>Common man (12+ years)</li> <li>Fashionista</li> <li>Celebrity</li> <li>Fashion Stylist</li> </ul>	<b>6. CUSTOMER CONSTRAINTS</b> <span>CC</span> <ul style="list-style-type: none"> <li>No cash on budget</li> <li>Network facilities</li> <li>Available devices</li> </ul>	<b>5. AVAILABLE SOLUTIONS</b> <span>AS</span> <p>Customers tries to purchase fashion products from local shops and other fashion apps where they spend a lot of time to get their desired products.</p> <p>the solution provides smart recommended (chatbot), cool offers, and flexible retain policies for easy shopping.</p>	Explore AS, Focus on J&P, tap into BE, understand
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <span>J&amp;P</span> <p>Build a solution through which a user can directly do their online shopping based on they choice without any search by using a 'chatbot'.</p>	<b>9. BEHAVIOUR</b> <span>BE</span> <ul style="list-style-type: none"> <li>fashion applications other than what customers are currently using.</li> <li>Go to various shops spending lots of time and energy which may or may not be a benefit to them.</li> <li>Visit directly to places where particular products are meant for, i.e., for examples people visit Kanchipuram for Kanchipuram silk sales.</li> </ul>	
Identify strong TR & EM	<b>3. TRIGGERS</b> <span>TR</span> <ul style="list-style-type: none"> <li>Offers</li> <li>Trends clothes at cheaper price</li> <li>Return policy</li> <li>Chatbot that helps in recommendation</li> </ul>	<b>10. YOUR SOLUTION</b> <span>SL</span> <p>The solution is to build a chatbot that helps customers to recommend fashion products based on his/her choice without any search.</p> <p>It asks customers as many questions as it needed for better recommendation.</p>	<b>8. CHANNELS of BEHAVIOUR</b> <span>CH</span> <p>8.1 ONLINE</p> <ul style="list-style-type: none"> <li>It'sy fashion applications other than what customers are currently using.</li> </ul>	Extract online & offline CH of BE
	<b>4. EMOTIONS: BEFORE / AFTER</b> <span>EM</span> <ul style="list-style-type: none"> <li>Disappointed &gt; Satisfied, after getting affordable fashion goods</li> <li>Frustrated &gt; Contented, after seeing trendy, branded collections of desired products</li> </ul>		<p>8.2 OFFLINE</p> <ul style="list-style-type: none"> <li>Go to various shops spending lots of time and energy which may or may not be a benefit to them.</li> <li>Visit directly to places where particular products are meant for, i.e., for examples people visit Kanchipuram for Kanchipuram silk sales.</li> </ul>	

## 4. REQUIREMENT ANALYSIS

### 4.1 FUNCTIONAL REQUIREMENTS

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form
FR-2	User Interaction	Interact through the Chat Bot
FR-3	Buying Products	Through the chat Bot Recommendation
FR-4	Track Products	Ask the Chat Bot to Track my Orders
FR-5	Return Products	Through the chat Bot
FR_6	New Collections	Recommended from chat Bot

### 4.2 NON-FUNCTIONAL REQUIREMENTS

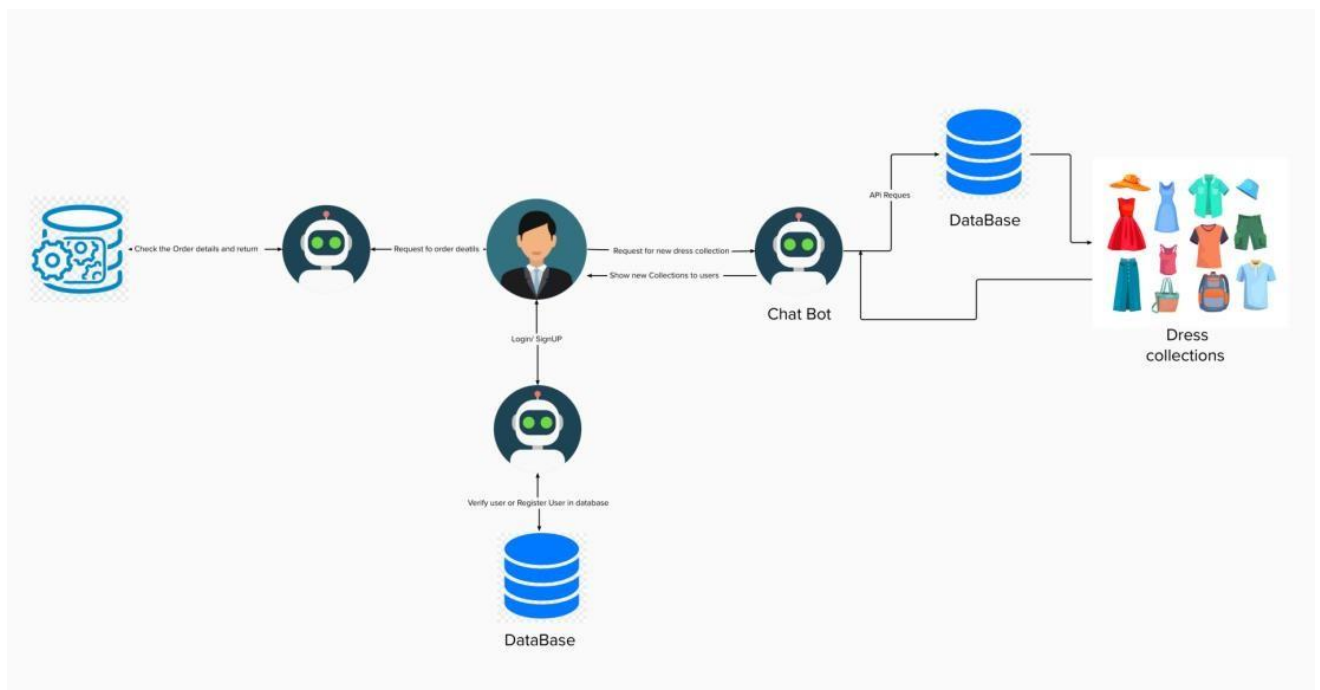

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	Using Android or IOS or windows applications.
NFR-2	<b>Security</b>	The user data is stored securely in IBM cloud.
NFR-3	<b>Reliability</b>	The Quality of the services are trusted.
NFR-4	<b>Performance</b>	Its Provide smooth user experience.
NFR-5	<b>Availability</b>	The services are available for 24/7.
NFR-6	<b>Scalability</b>	It's easy to scalable size of users and products.

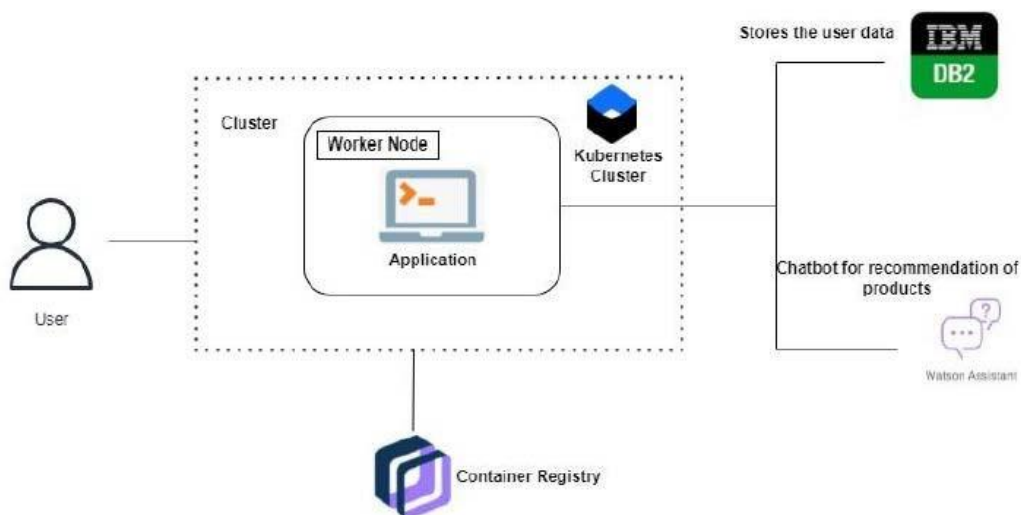

## 5. PROJECT DESIGN

### 5.1 DATA FLOW DIAGRAMS

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

### 5.2 SOLUTION & TECHNICAL ARCHITECTURE

## 5.3 USER STORIES

### User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can access my data by login	High	Sprint-1
	Dashboard	USN-6	As a user , I can view the dashboard and by products		High	Sprint -2
Customer (Web user)	Registration / Login	USN-7	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard		Sprint -1
Customer Care Executive	Contact with Customers	USN-8	As a Customer customers care executive, I solve the customer Requirements and feedback	I can receive calls from customers	High	Sprint-1
Administrator	Check stock and Price , orders	USN_9	As a Administrator , I can Check the database And stock details and buying and selling prices	I am the administrator of the company	High	Sprint -2

## 6. PROJECT PLANNING & SCHEDULING

### 6.1 SPRINT PLANNING & ESTIMATION

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story points	Priority	Team Members
Sprint-1	Setting up App environment	USN-1	As a user, I can register in ICTA Academy and create IBM cloud account.	2	High	Kuberan V Sharulatha I
Sprint-1		USN-2	As a user, I will create a flask project	1	Low	Maruthan G Jafri melba W
Sprint-1		USN-3	As a user, I will install IBM Cloud CLI	2	Medium	Kuberan V Maruithan G
Sprint-2	Setting up App environment	USN-4	As a user, I can install Docker CLI	1	Low	Kuberan V Sharulatha I
Sprint-2		USN-5	As a user, I will Create an account in sendgrid	2	Medium	Maruthan G Jafri melba W

### 6.2 SPRINT DELIEVERY SCHEDULE

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	18	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	18	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	18	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	18	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

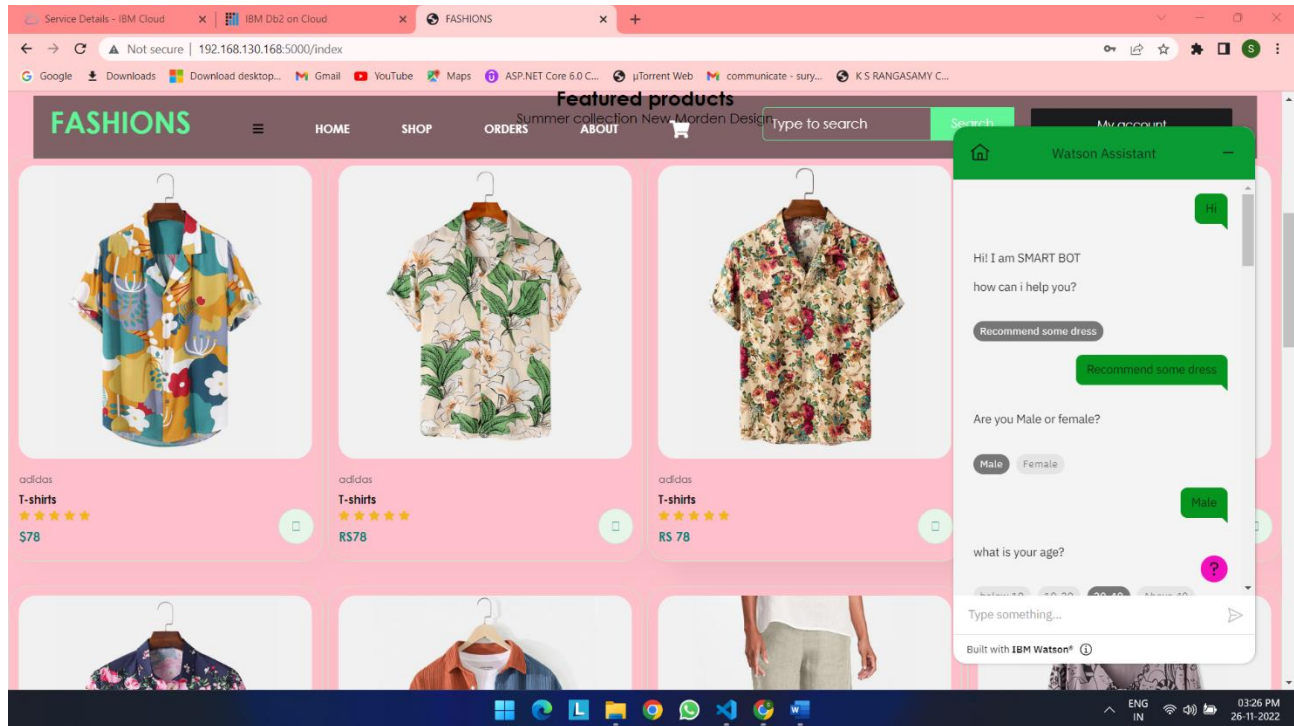

## 6.3 REPORTS FROM JIRA

## 7.CODING & SOLUTIONING

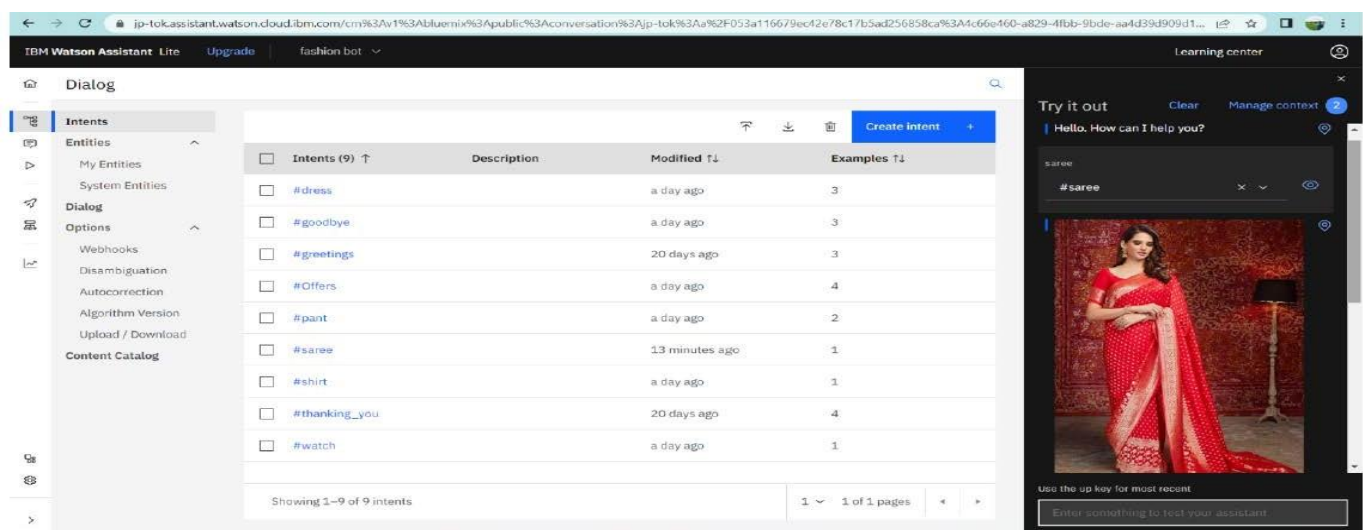

### 7.1 FEATURE 1

Using chat bot we can manage user's choices and orders.

### 7.2 FEATURE 2

Chat Bot promote the best deals and offers on that day.

## 7.3 DATABASE SCHEMA

The screenshot displays the IBM Db2 on Cloud console interface. The top navigation bar includes tabs for 'Load Data', 'Load History', 'Tables', 'Views', 'Indexes', 'Aliases', 'MQTs', 'Sequences', and 'Application objects'. The 'Tables' tab is currently selected. Below the navigation bar, there is a search bar labeled 'Find schemas or tables' and a 'Refresh' button. The main content area is divided into two panels: 'Schemas' and 'Tables'.

**Schemas Panel:**

Name	Type	Tables
DTP46044	User	5

Total: 1, selected: 1

**Tables Panel:**

Name	Schema	Properties
ORDERS	DTP46044	...
PRODUCTS	DTP46044	...
PRODUCT_LEVEL	DTP46044	...
PRODUCT_VIEW	DTP46044	...
USERS	DTP46044	...

Total: 5, selected: 0

The bottom of the screenshot shows a Windows taskbar with various application icons and a system tray indicating the time as 19:15 on 18-11-2022.

## 7. TESTING

### 8.1 TEST CASES

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Login	5	0	0	5
Register	7	0	0	7
Home Page	2	0	0	2
Order page	3	0	0	3
Order products	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

## 8.2 USER ACCEPTANCE TESTING

### Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the Smart Fashion Recommender Application project at the time of the release to User Acceptance Testing (UAT).

### Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	5	5	2	3	21
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	11	2	4	20	37
Not Reproduced	0	0	1	0	1
Skipped	0	0	1	1	2
Won't Fix	0	5	2	1	8
Totals	24	14	13	26	77

## 8. RESULT

### 9.1 PERFORMANCE METRICS

Project team shall fill the following information in model performance testing.

NFT - Risk Assessment									
S.No	Project Name	Scope/feature	Functional Changes	Hardware Changes	Software Changes	Impact of Downtime	Load/Volumen Changes	Risk Score	Justification
1	Smart Fashion Recommender Application	New	Low	No Changes	Moderate		>5 to 10%	ORANGE	As we have seen the chnages

NFT - Detailed Test Plan				
S.No	Project Overview	NFT Test approach	Assumptions/Dependencies/Risks	Approvals/SignOff
1	Smart Fashion Recommender Application	Manual testing	laptop or mobile with internet connection vkparameshwaran	

End Of Test Report								
S.No	Project Overview	NFT Test approach	NFR - Met	Test Outcome	GO/NO-GO decision	Recommendations	Identified Defects (Detected/Closed/Open)	Approvals/SignOff
1	Smart Fashion Recommender Application	Manuale		Worked as we expected		Use Laptop / desktop Mode	No Defects	Kuberan V

## **9. ADVANTAGES & DISADVANTAGES**

### **ADVANTAGES:**

- Its helps to user Shopping with Assistant
- Its helps to user manage there order list
- Its helps to user shopping at home

### **DISADVANTAGES:**

- User have fear about online shopping
- User have sometimes received wrong items
- User have fear about online payment

## **10. CONCLUSION**

Recommendation systems have the potential to explore new opportunities for retailers by enabling them to provide customized recommendations to consumers based on information retrieved from the Internet. They help consumers to instantly find the products and services that closely match with their choices. Moreover, different state-of-the-art algorithms have been developed to recommend products based on users' interactions with their social groups. Therefore, research on embedding social media images within fashion recommendation systems has gained huge popularity in recent times. This paper presented a review of the fashion recommendation systems, algorithmic models and filtering techniques based on the academic articles related to this topic. The technical aspects, strengths and weaknesses of the filtering techniques have been discussed elaborately, which will help future researchers gain an in-depth understanding of fashion recommender systems. However, the proposed prototypes should be tested in commercial applications to understand their feasibility and accuracy in the retail market, because inaccurate recommendations can produce a negative impact on a customer. Moreover, future research should concentrate on including time series analysis and accurate categorization of product images based on the variation in color, trend and clothing style in order to develop an effective recommendation system. The proposed model will follow brand specific personalization campaigns and hence it will ensure highly curated and tailored offerings for users. Hence, this research will be highly beneficial for researchers interested in using augmented and virtual reality features to develop recommendation systems.

## **11. FUTURE SCOPE**

There has been significant progress recently in fashion recommendation system research, which will benefit both consumers and retailers soon. The use of product and user images, textual content, demographic history, and cultural information is crucial in developing recommendation frameworks. Product attributes and clothing style matching are common features of collaborative and content-based filtering techniques. Researchers can develop more sophisticated hyper personalized filtering techniques considering the correlation between consumers' clothing styles and personalities. The methods based on employing a scoring system for quantifying each product attribute will be helpful in increasing the precision of the model. The use of virtual sales advisers in an online shopping portal would provide consumers with a real time offline shopping experience. Retailers can collect the data on users' purchase history and product reviews from the recommendation system and subsequently use them in style prediction for the upcoming seasons. The integration of different domain information strengthens the deep learning paradigm by enabling the detection of design component variation, which improves the performance of the recommendation system in the long run. Deep learning approaches should be more frequently used to quickly explore fashion items from different online databases to provide prompt recommendations to users or consumers.

# SCREENSHOTS

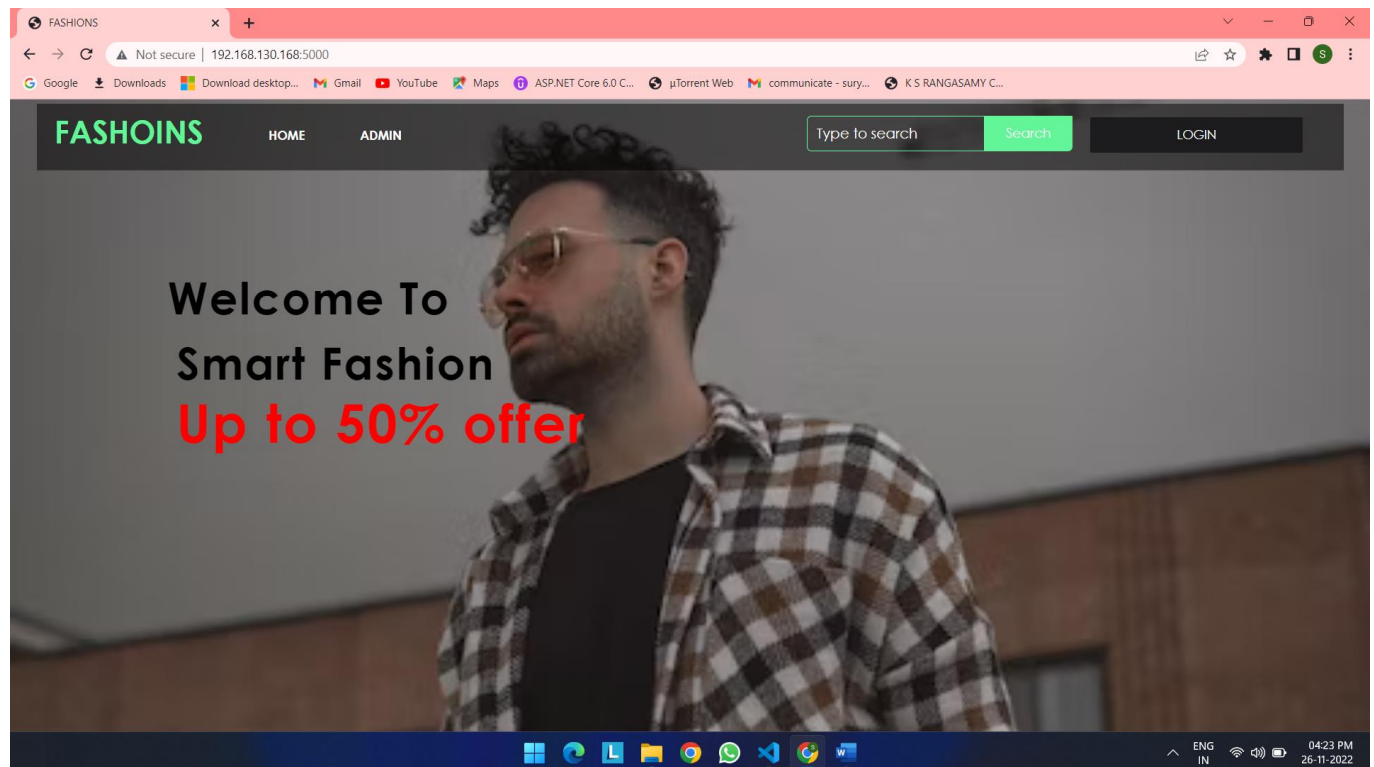

## Register/Login page:

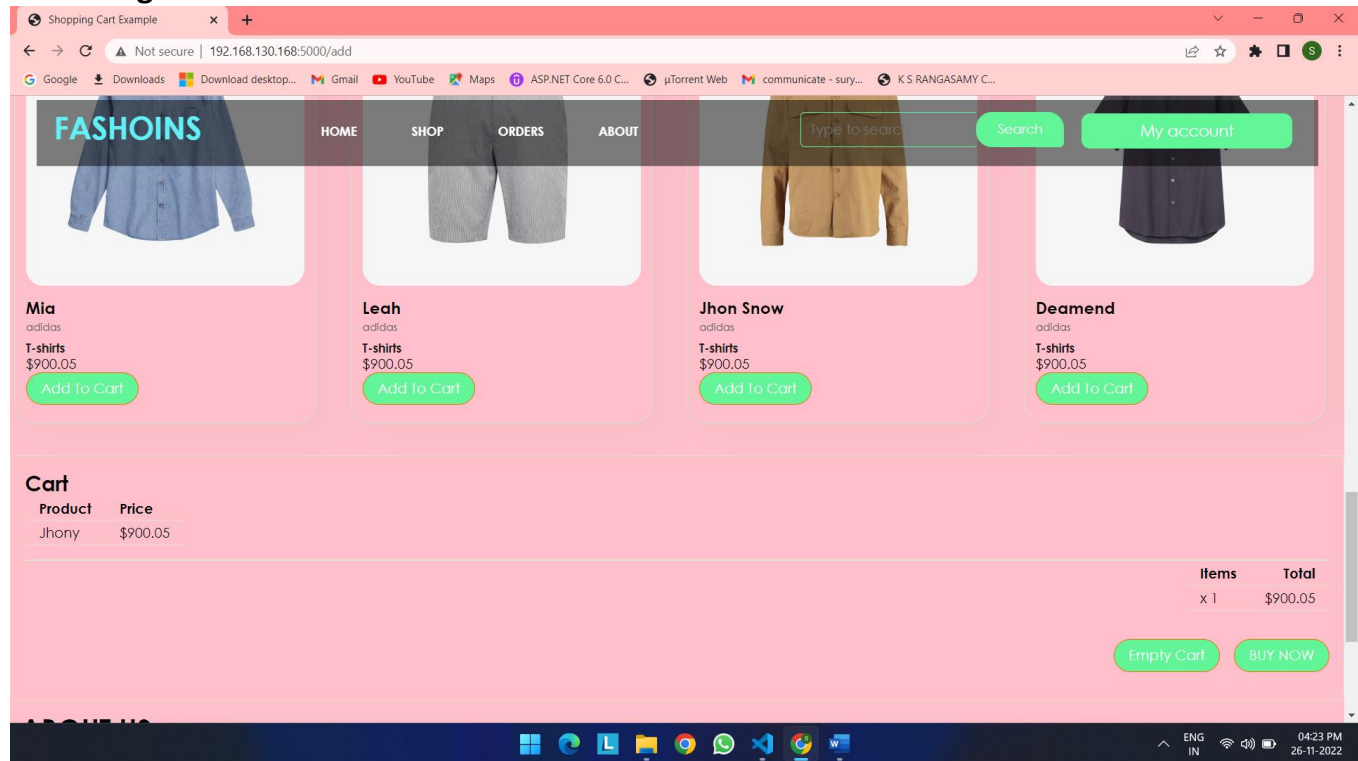

## Home page

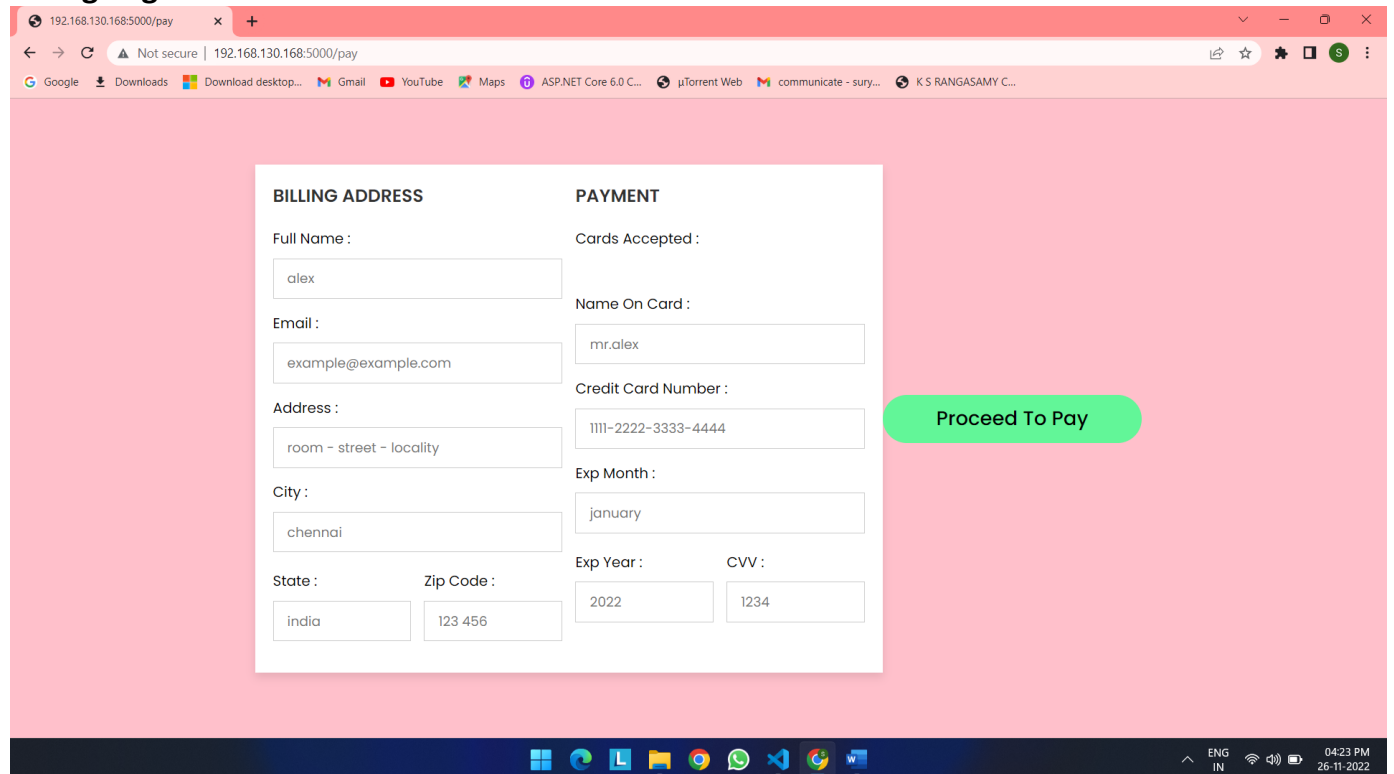

## Home Page

## Order Page

## Billing Page

## Chatbot

The screenshot displays a web browser window with a single tab titled "FASHIONS". The address bar shows "Not secure | 192.168.130.168:5000/home1". The browser's toolbar includes icons for Google, Downloads, and various open tabs. The website itself has a dark purple header with the "FASHIONS" logo and navigation links for HOME, SHOP, ORDERS, and ABOUT. A search bar is located on the right side of the header. The main content area features two large promotional banners: "upto 50% off FOR WOMENS" and "upto 50% off FOR MENS", each with a "shop now" button. Below these is a section for "Featured products" titled "Summer collection New Morden Design". A chatbot overlay, labeled "Watson Assistant", is positioned on the right side of the screen. It contains a conversation history with a user asking for dress recommendations and providing gender and age information. The chatbot also displays a product image of a man's shirt and a text input field for further interaction. The bottom of the browser window shows a Windows taskbar with various application icons and a system tray indicating the time as 04:23 PM on 26-11-2022.
